

What Happened to Public Education in America?

Many parents today that have not been paying attention closely are learning what is going on in the public education system today across this nation. This article is going to highlight multiple problems parents are facing with the public education in the state of Texas where I live. Parents in other states are dealing with the same problems and issues in their respective districts.

Key Problems Identified

- Social Engineering
- A Communist and Socialistic Establishment Environment with Administrators
- School Districts Hiding from Parents Their Involvement with Trans gendering of Students
- School Districts Hiding Sexual Misconduct of Teachers and Staff with Students and Failing to Report Incidents to Authorities
- Allowing the Teaching and Indoctrination of Perverted Ideologies that Contradict Traditional Views of Family Values
- Suppressing the Rights of Students Based on Their Religious Convictions and Teaching
- Financial Misconduct and Failing to Provide Transparency Regarding Taxpayer Funds
- Failing to Cooperate with Taxpayers to Release Financial Records and Data Requested in Accordance with the Open Records Act in Texas
- Putting Taxpayers in Financial Duress and Jeopardy of Losing Their Homes with Bond Programs That are Illegal
- Failure to Meet Minimum Standards for Academic Achievement and Expectations

Has Public Education Become the New Communist Party in America and Legalized by Elected Leaders?

Taxpayers in north central Texas are taking school officials and board members head on for their communist and socialistic positions and actions. In north Texas taxpayers have been faced with **Nazi SS** type tactics and attitudes from school superintendents and board members for simply asking for basic information and records allowed by law regarding taxpayer money and taxes collected to operate the public school system. School districts have hidden debt and operating cost for decades in Texas using a special piece of legislation allowing school districts to enter into multi-million-dollar energy contracts using off-balance sheet financing tactics and long-term-lease purchase agreements. Another key point in the federal complaints filed are in regard to lucrative tax abatement agreements to subsidize the Green Energy industry in Texas on the backs of taxpayers. State leaders have failed for decades to listen to taxpayer's concerns regarding what is going on in classrooms and behind closed doors with school officials and administrators. Multiple federal complaints have been filed in north Texas with the US Justice Department and the Securities and Exchange Commission to investigate school districts in regard to school finances and bonds issues by school districts over the past two decades.

Taxpayers can no longer set on the sidelines and must get involved now in the fight against the communist and socialist government run education system in Texas and across the nation. Public educators have failed to meet the minimum standards of academic achievement for the past several decades. Not only are students graduating that cannot read or comprehend at the same levels as students graduating over 50 years ago, but they do also not even have the basic knowledge and understanding of what made this nation great at one time in history. Children are taught today to depend on the government to meet their needs. These changes did not happen overnight. Over the past several decades at least two generations of adults that graduated since 1970 cannot function at the same level of social responsibility as their parents and grandparents did. The downfall of society in America is very much the result and outcome of the public education system in America.

As a father and parent of four children my wife and I homeschooled our four children. I would do the exact same thing again and have and still involved in getting parents involved in homeschooling and private schools. The public education system is one of the most dangerous places a parent could ever let their children go for many reasons. School violence has and still is a problem today. The dangers of social engineering and being a victim of sexual assault or abuse is a daily problem across the nation. Taxpayers and parents must get involved now and take a stand with the thousands of parents that joined forces to fight back and take charge of their families again.
